Projects

Blog React App

- Developed a full-stack blog application using React for the frontend and MongoDB for the backend.
- Implemented user authentication with registration and login functionality.
- Integrated RESTful APIs for creating, updating, and deleting blog posts.
- Used protected routes to ensure only authenticated users can create, edit, or delete posts.
- View on GitHub | View live demo

Fast Food Template Website

- Designed and built a template for a fast-food restaurant website using HTML, CSS, and JavaScript.
- Included sections for menu, testimonials, and contact information with a responsive layout.
- Focused on modern, appealing design and user-friendly navigation.
- View on GitHub | View live demo

Weather App

- Created a weather application that fetches real-time data using an API, featuring current weather display, 4-day forecast, and search history.
- Implemented a responsive design to ensure usability across various devices.
- features a sleek interface, including a burger menu for easy city selection and search functionality.
